## Picture Download

Connect your Photo Frame by USB cable to the PC which has Photo Viewer software. A dialogue box as below will appear on the display of Photo Frame right after connecting the Photo Frame to the PC.

1. For powering your Photo Frame by USB power, press "◀" or "▶" to select "USB Charge" and then press "M" to confirm. Your Photo Frame will be able to playback the photos while powered by USB power but will not be able to download photos or turn it off. (It will go to "USB Charge" mode automatically if you do not press one of the three buttons mentioned above within 60 seconds.)
2. For downloading pictures to your Photo Frame, press "◀" or "▶" to select "USB Update" and press "M" to confirm. Your Photo Frame will be detected by your computer automatically and then run "Photo Viewer" in your computer to execute the software to start the photo download process. You will see a dialogue box showed as below on the display of your computer. (If you have selected "USB Charge" but want to change to "USB Update", you have to disconnect Photo Frame from the computer first and then reconnect it to the computer to follow the procedure to "USB Update".)

Select photos from your computer and then click to add the selected photo into the window.

You can edit the selected photo by clicking or to rotate the photo. Click or to cut the photo. Click to delete the selected photo. Then press to download the selected photos into Photo Frame.

When the downloading is completed, it will pop-up a dialogue box "Photo Viewer data synchronize complete". Click OK to complete the process.
